Joint Open Lab : Project at a glance

Joint Open Labs are research and innovation laboratories set up within university centres, as a result of partnerships and agreements between Telecom Italia and the major Italian universities in specific fields of scientific and technological interest.

JOLs in brief:

- 5 universities involved in the first phase (Polytechnic University of Turin, Polytechnic University of Milan, Trento University, Sant'Anna School of Advanced Studies in Pisa and Catania University)
- Interdisciplinary teams focusing on university areas of excellence
- "Open" research at international level in collaboration with organisations such as the European Institute of Technology (EIT) and Massachusetts Institute of Technology (MIT)

Mission:

Investigation of technologies and development of service concepts where the focus is mainly placed on the **relationship between robots and the cloud computing**, addressing issues arising from the use of robotic services in domestic and enterprise environments not only of technological, legal, economical, sociological or psychological nature, but also related to ergonomics, cognitive perception, and relational experience **exploiting the assets** of Telecom Italia such as the broadband connectivity (eg 4G-LTE) and the Cloud Computing Infrastructure.

Swarm Joint Open Lab - Beyond the Internet of Things

General overview JOL Swarm and open positions

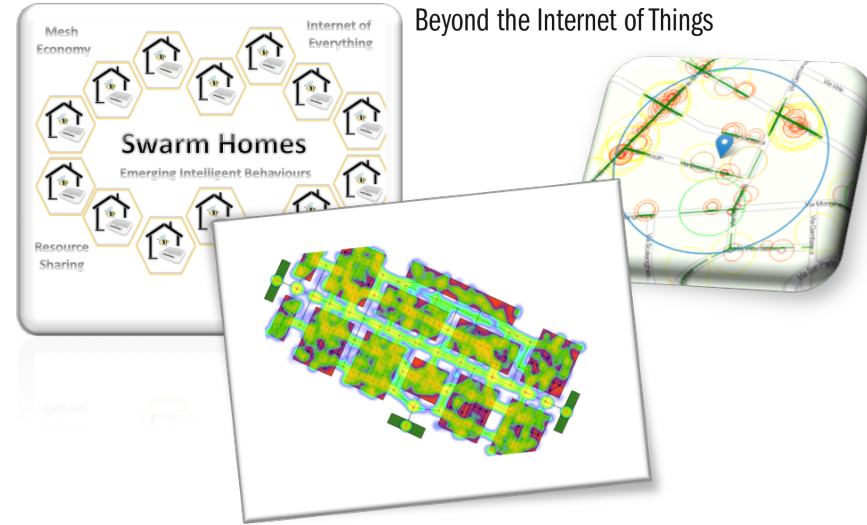

JOL
JOINTOPENLAB

Claudio BOREAN

Lab: Beyond the Internet of things (IoT)

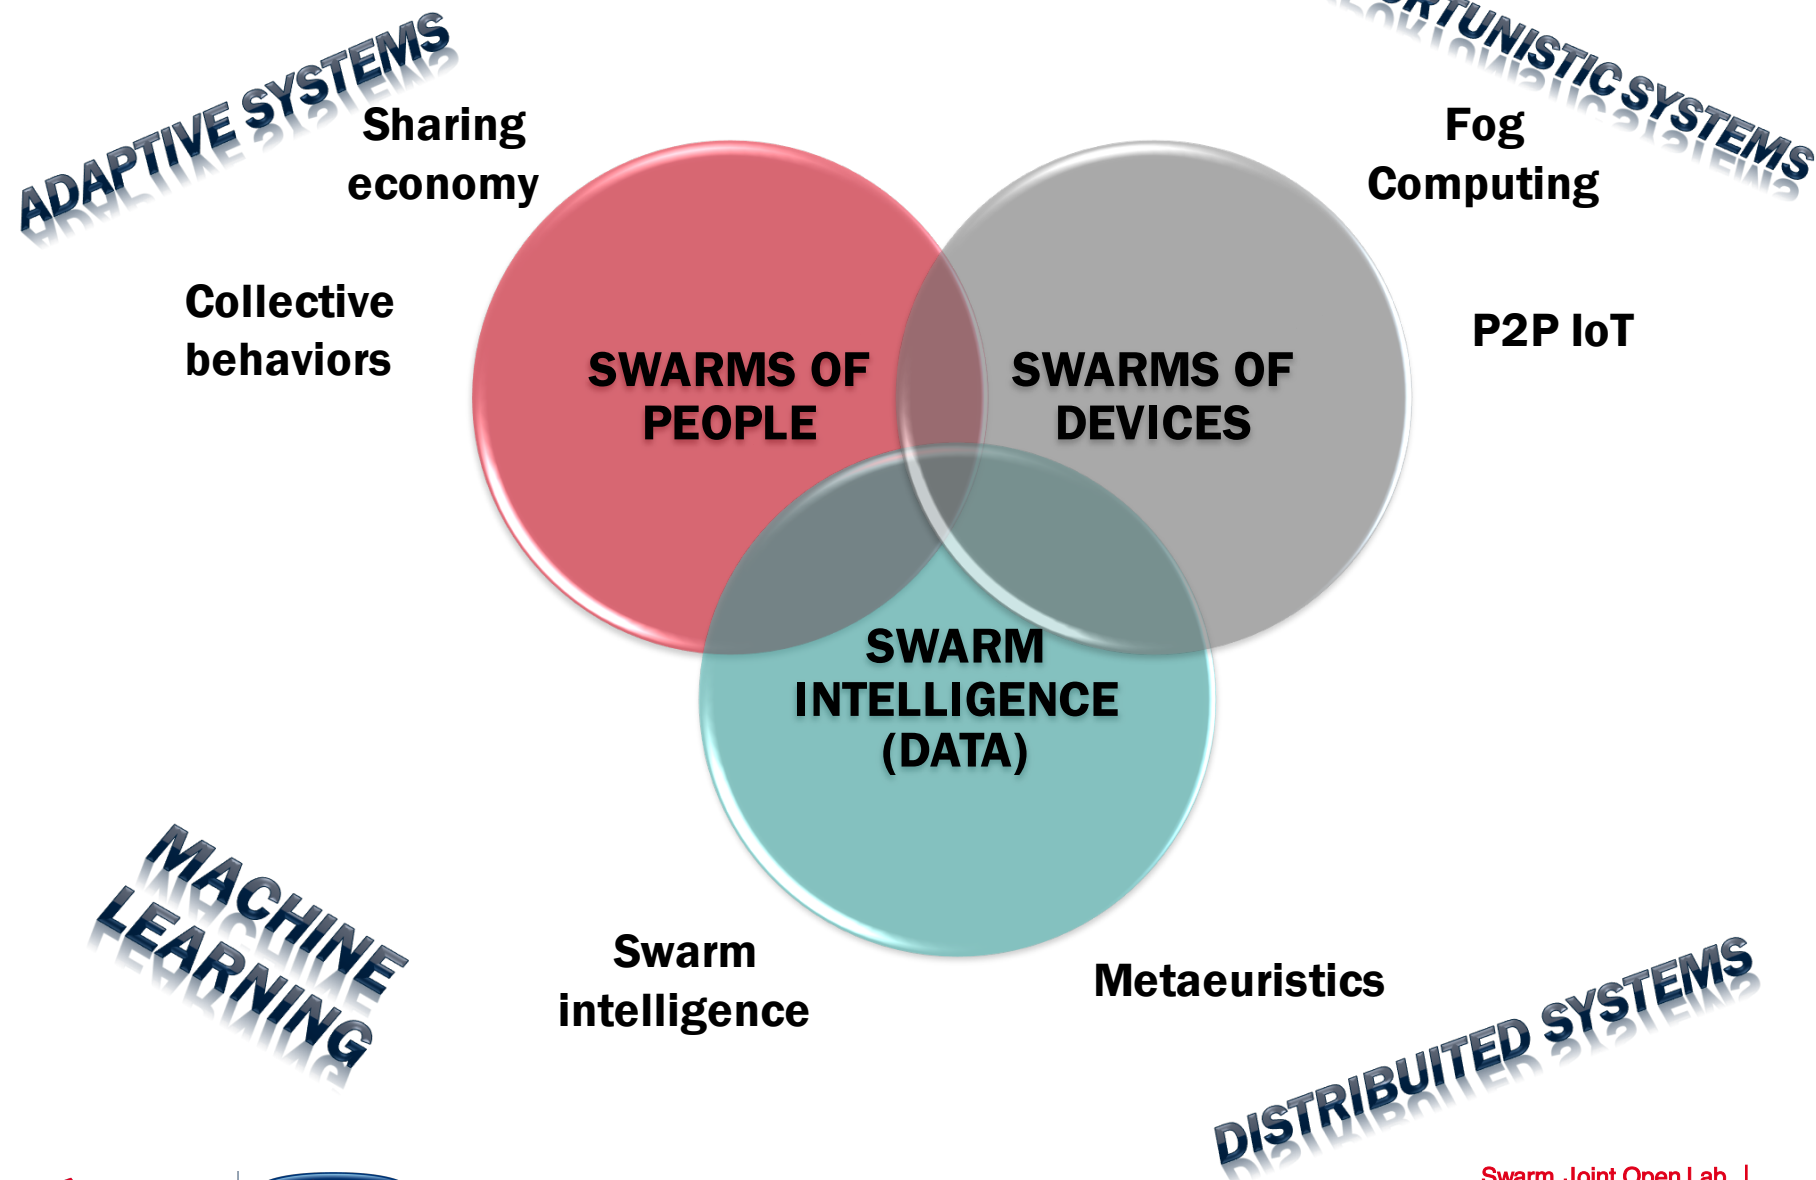

Areas: Internet of everything and distributed systems to enable new services

SWARM Joint Open Lab studies and design innovative services leveraging on the interactions of a multitude (“swarm”) of **people, things, data, places**, and on the competitive assets of the **telco operator**. New service concepts and new technologies based on complex adaptive systems (**swarms**) are explored and developed.

**AREAS: SWARM INTELLIGENCE, INTERNET OF THINGS,
COOPERATIVE APPLICATIONS**

For PhD, THESIS of INTERNSHIP just google «JOL SWARM»

Overview and PhD proposals

Gianluca Francini

JOL VISIBLE

Overview

Lab: Multimedia, video and image analysis

Areas: Visual Intelligence, Big Data

Video and images make up the overwhelming majority of all data that is acquired, produced, transmitted and stored every day. VISIBLE develops algorithms and techniques for implementing **visual intelligence**: systems that integrate different methods able to learn from, discover meaning in, and reason about visual data.

JOL VISIBLE

Main research topics

Object identification

MPEG Compact Descriptors for Visual Search

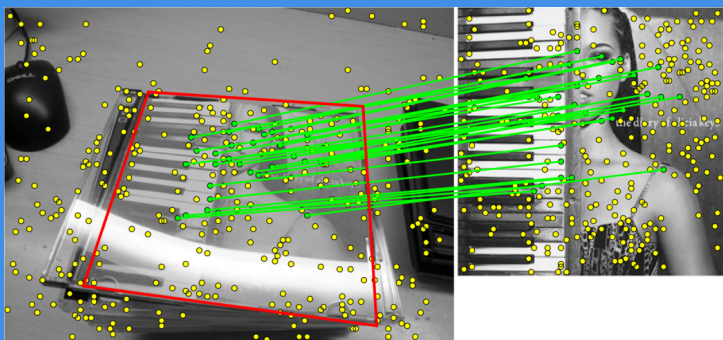

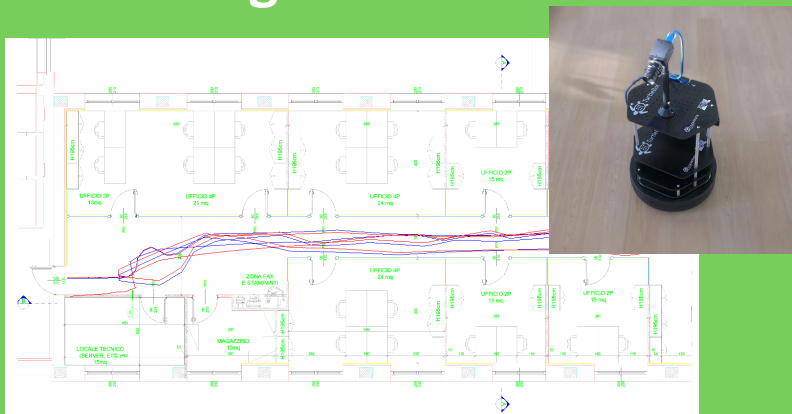

Image and video classification

Deep learning

Visual navigation

Fast algorithms
